The screenshot shows the DBeaver 26.2.1 interface. On the left, the 'public' schema is expanded, showing the 'flights' table with its columns: flight_id (int4), sch_departure_time (timestamp), sch_arrival_time (timestamp), departing_airport_id (int4), arriving_airport_id (int4), departing_gate (text), arriving_gate (varchar(50)), airline_id (int4), act_departure_time (timestamp), act_arrival_time (timestamp), created_at (timestamp), and updated_at (timestamp). The 'flights' table size is 32K.

The main editor displays the following SQL query:

WHERE (sch_arrival_time - sch_departure_time) > INTERVAL '300 minutes';
```

The 'Statistics 1' tab shows the following results:
